

Regenerate Africa works with businesses, NGOs, government agencies and development partners to translate sustainability ambitions into practical action. We provide hands-on support across ESG, climate action, green and circular business, carbon markets, nature-based solutions and professional training.

Our Africa-focused approach combines strategy, technical expertise and capacity building to help organisations reduce environmental impact, strengthen resilience, unlock new opportunities and create measurable value. Regenerate Africa helps organisations move from sustainability commitments to sustainability results.

SUSTAINABILITY ADVISORY SERVICES

Hands-on consulting for companies, NGOs and government agencies that need to set and deliver real sustainability goals and policies.

- Carbon footprint measurement and reduction planning
- ESG, policy design and standards/certification support
- Climate action and resilience planning
- We design and customise sustainability and ESG curricula for institutions, corporates and training partners, including green and circular-economy content tailored to a sector or organisation's specific needs.

Sme Green & Circular Transition Training

Practical training that helps small and medium enterprises shift from linear to green, circular business models, covering resource efficiency, waste-to-value practices, and sustainable supply and market chains.

CARBON MARKETS

We work with businesses, NGOs, and landowners to access carbon markets with ease, managing the entire process from project design to monetization. This ensures environmental actions are turned into verified carbon credits, income opportunities, and measurable impact.

- Carbon footprint calculation for your business
- Access to buy or develop carbon credit projects
- Nature-based projects: reforestation, regenerative agriculture, clean energy, biodiversity credits

COOPERATE TREE PLANTING FOR CLIMATE AND ESG IMPACT

Turn your sustainability commitments into measurable impact with Regenerate Africa's Corporate Tree Planting for Climate and ESG Impact campaign. In partnership with Great Outdoors Kalanamu, we help businesses create lasting environmental and social value by planting indigenous trees that restore ecosystems, capture carbon, conserve biodiversity, and strengthen community resilience. Beyond planting trees, your organization receives geotagged impact tracking, ESG-ready reports, branded recognition, and compelling storytelling content, making it easy to showcase your commitment to people, planet, and responsible business. Together, we can grow a greener future while building a legacy that your employees, customers, and stakeholders will remember.
